

Balanced Engineering & Construction Pte Ltd

PROJECT ENGINEER

Balanced Engineering & Construction Pte Ltd specialises in design, build, inspection, repair and maintenance of industrial and commercial chimneys and silos. With a number of offices in the Asia Pacific Region, BEC is a market leader in this highly-specialised field, with an impressive track record. Due to our rapid expansion, we are now looking for suitable candidates to join our team.

Responsibilities :

- Assist Project Manager with day to day activities on site.
- Supervise team on site.
- Liaise with Client / Clients' representatives on project related matters.
- Plan, schedule and organize site labour, equipments and materials.
- Prepare work programs & method statements.
- Apply for site work permits.
- Maintain daily site diary and prepare reports on works progress and other related activities.
- Assist with implementation and maintenance of QA/QC procedures and documentation.
- Ensure work carried out in a safe manner and all safety regulations are strictly complied with.
- Attend relevant meetings and disseminate information to all involved.
- Coordinate with Purchaser on material requirements and delivery schedule.
- Assist Project Manager with the preparation of handover documents on completion of project.

Requirements:

- Have a Degree in Civil or Mechanical Engineering
- Fluent in both written and spoken English.
- Minimum 3 years relevant experience working on construction sites, preferably in power or process plants.
- Willing to work hard and put in long hours.
- An independent person who can work with minimal supervision.
- Must be an excellent team player.
- Physically fit and healthy and not afraid of heights.
- Knowledge of MS Office.
- Singaporean, Malaysian or Singapore PR

Interested applicants who meet the above are invited to write in with detailed resume stating qualifications, work experience, current and expected salary to hr@be-con.com
